

COP 4 | The Digital ID Global Best Practices Tool | Primer

the
Inclusion
Hub

Powered by:

aapti institute

A 'community of practice' was initiated to strengthen the understanding and effectiveness of the ecosystem on gender inclusive thinking and design

Why?

Low access to research conducted in this space

Poor connectivity between stakeholders

Lack of a platform to consolidate information

How?

Arranging regular webinars and convenings

Sharing regular updates about the ecosystem

Convening members at an annual conference

Who?

F.D.R.E Authority for Civil Society Organizations (ACSO)

Co-Develop

Save Generation Development Organisation

Ethiopian Women Empowerment Association

Emmanuel Development Association

Ethiopia National ID Program (NIDP)

FIT-ED

Siiqqee Women's Development Association

Consortium of Christian Relief & Development Associations (CCRDA)

Digital Opportunity Trust

Consortium of Self-help group Approach Promoters (CoSAP)

Chrysalis

Shega Media

Center for Accelerated Women's Economic Empowerment

The COP has conducted 3 virtual convenings, 1 in-person event and hopes to continue this initiative by adding relevant stakeholders from different geographies

COP 1: Understanding Women's access to services through Digital IDs

Date: 18th August, 2023

[Event Readback](#)

COP 2: Understanding the nuances of inclusion and accessibility

Date: 26th October, 2023

[Event Readback](#)

COP 3: Understanding nuances of gender inclusion in digital ID systems: Country observations from the field

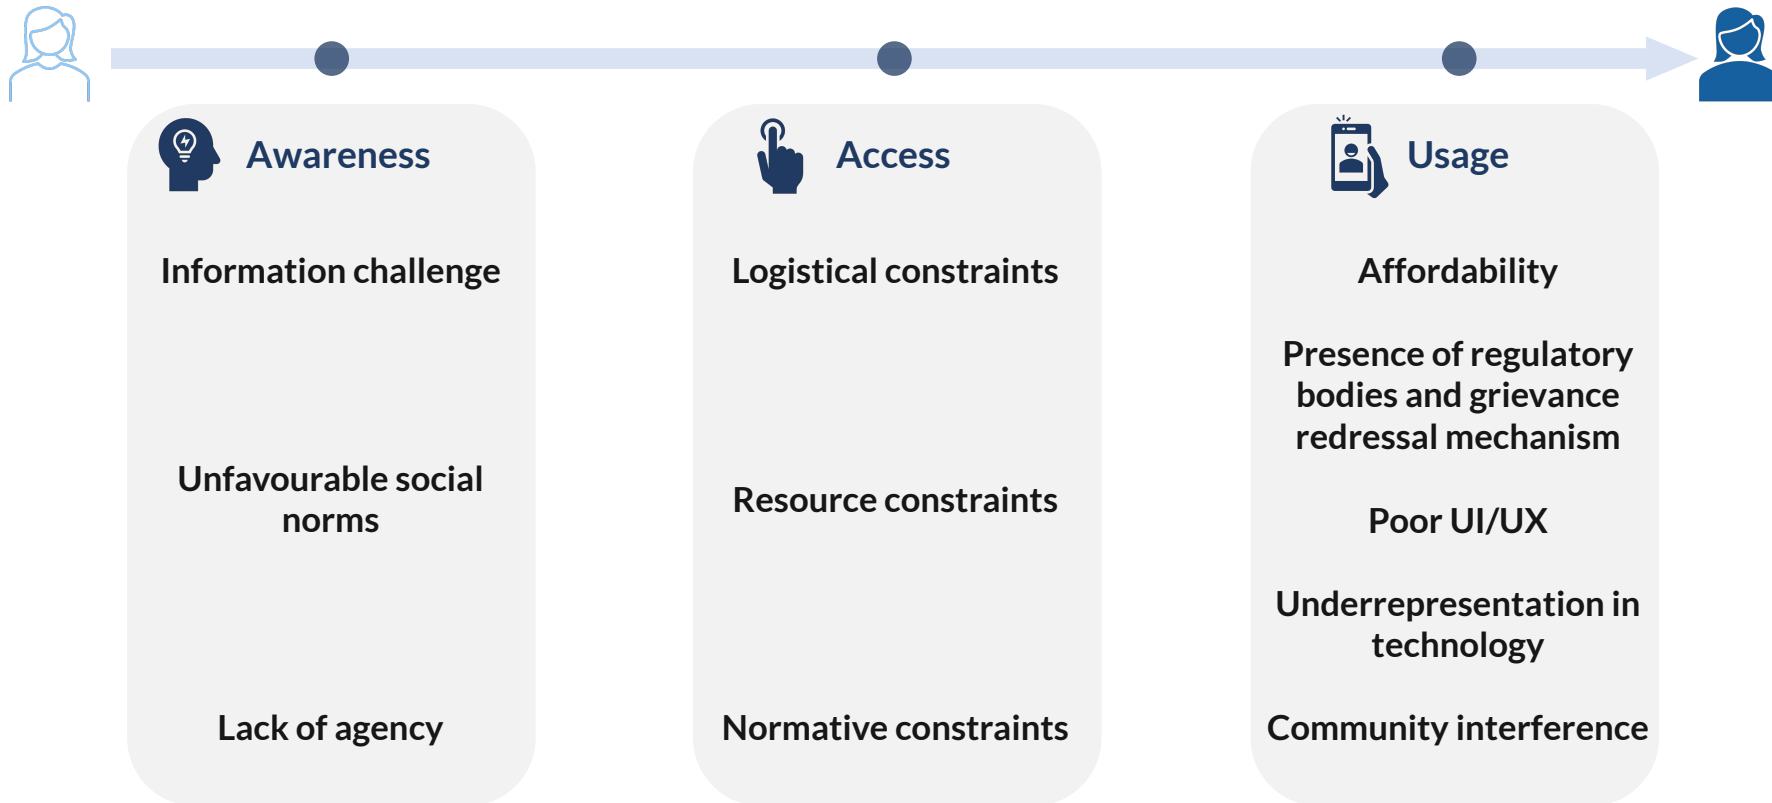

Date: 23rd January, 2024

COP 4: Gathering insights on the Best Practices Tool: Exploring challenges and Global Best Practices

Date: 6th March, 2024

Secondary research unpacked the various challenges women when understanding, accessing, and using foundational ID

To unpack women's interactions with digital IDs, the following categories were identified as key areas of focus

Information Challenge

Women often face challenges to access information that pertains to how they can interact with digital or identity systems

Resource and logistical constraints

In order to access and obtain their identities, women face a plethora of logistical and resource based challenges

Normative challenges

Women continue to face structural challenges that are often enforced by the societal structure that they are part

Intermediaries and grievance redressal

Limited offline intermediaries often increase hesitation amongst women to interact continuous with such systems

Biases and hindrances

Systems often display inherent technological and normative biases that further inhibit women from interacting with ID systems

Today's session will focus on understanding the most pertinent areas, and how a tool can help design and implement gender inclusive digital IDs

The tool should be answered by: **ID deployers**

By answering the questions highlighted in this tool, we aim that global digital ID developers can strengthen gender inclusive thinking and design within their systems. The tool also highlights the implications in case the answers to the questions are "No" and shares best practices from observed field research and secondary research

The deployment of digital IDs themselves should be gender sensitive, and should enable women to participate within their communities, surroundings and economies.

At the onset, such systems should help address areas where women's agency is impacted, and also address how to empower women

Agency

Ability to Act

Ability to take decisions

Ability to take risks

Empowerment

Equitable access to services, benefits, economic opportunities, and leadership

Civic and community participation

Control over resources, status, and self expression

To understand the challenges that can be addressed by ID deployers more effectively, the following categories have been prioritised

Awareness Understanding the pathways to access digital ID systems.

Role of Information

Role of education, literacy, and training

Resource considerations

Role of actors

Purpose

Process

Infrastructure

Practices

Existing knowledge and literacy

Existing training and connecting pathways

Sources of information

Information access point

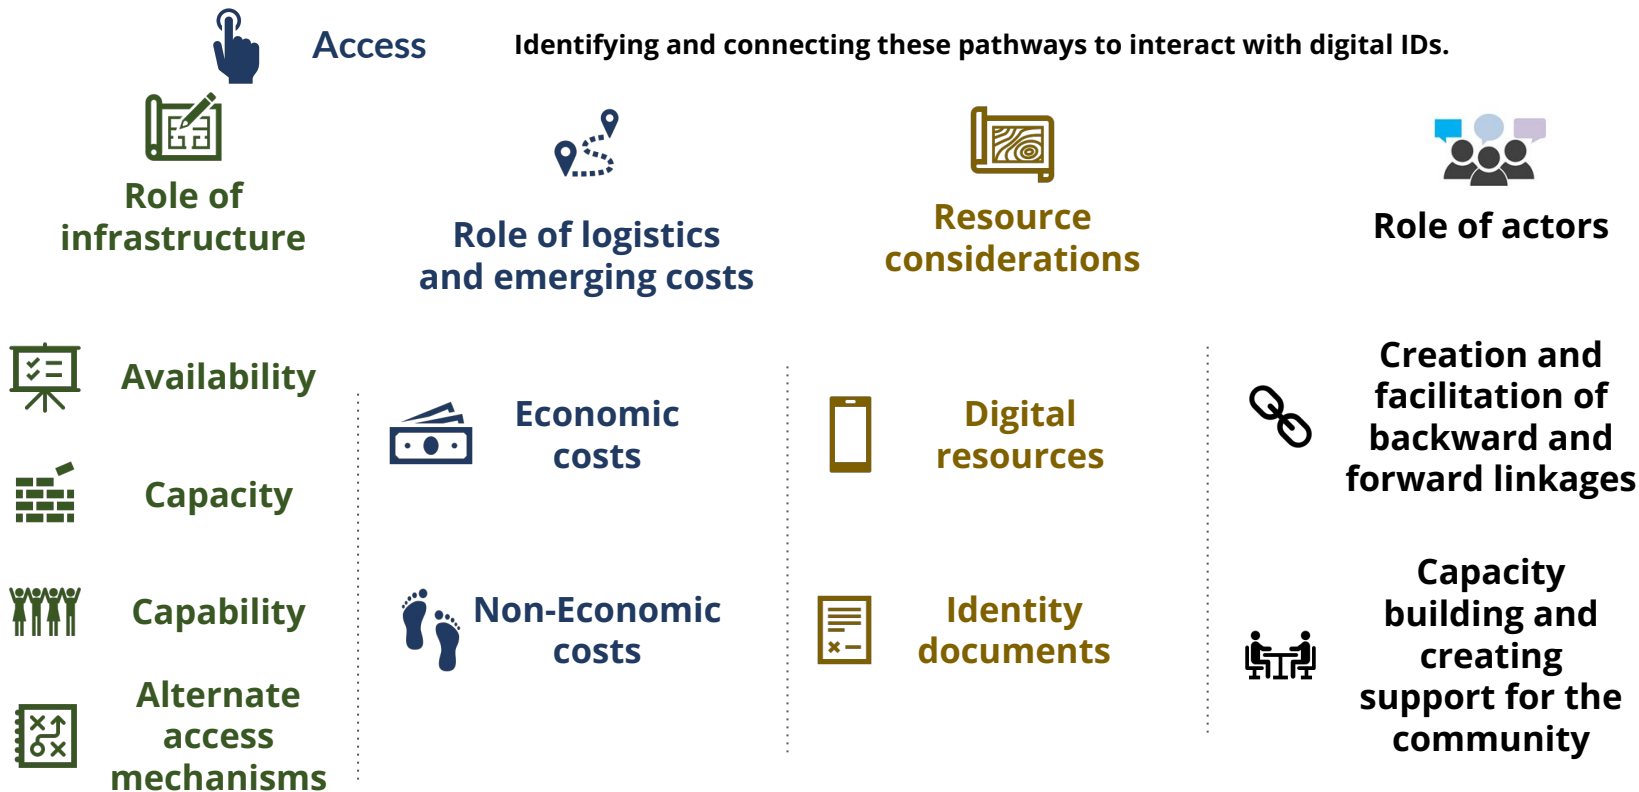

Creation and facilitation of resource and pathways

Influence behavioral change

To understand the challenges that can be addressed by ID deployers more effectively, the following categories have been prioritised

To understand the challenges that can be addressed by ID deployers more effectively, the following categories have been prioritised

Usage

Leveraging a digital ID to improve women's agency and empowerment.

Ecosystem infrastructure

Logistics and emerging costs

Resource ownership

Role of actors

Availability

Economic costs

Different identity documents

Creation of infrastructure and facilitation of resources and logistics

Facilitating authentication

Creating and disseminating progress

Capacity

Non-Economic costs

Resources
